

SOLARSEAL

Multi-layer Thermal Reflective Insulation

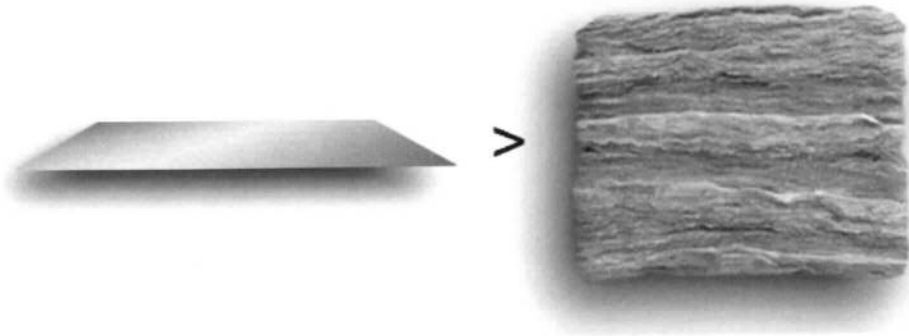

SOLARSEAL

Is essentially two products in one.

**2 layers of pure reinforced reflective
Insulation that produces a system
R-value of 6.**

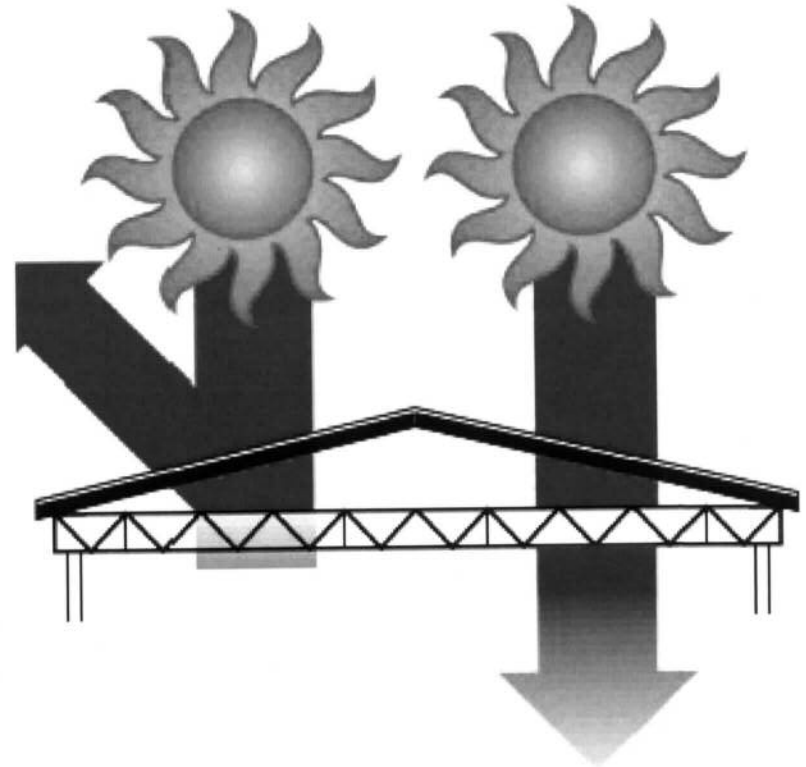

SOLARSEAL combines R-Value with a Dual Reflective Shield that reflects 97% of the heat that it comes in contact with. Mass insulation only slows down heat transfer.

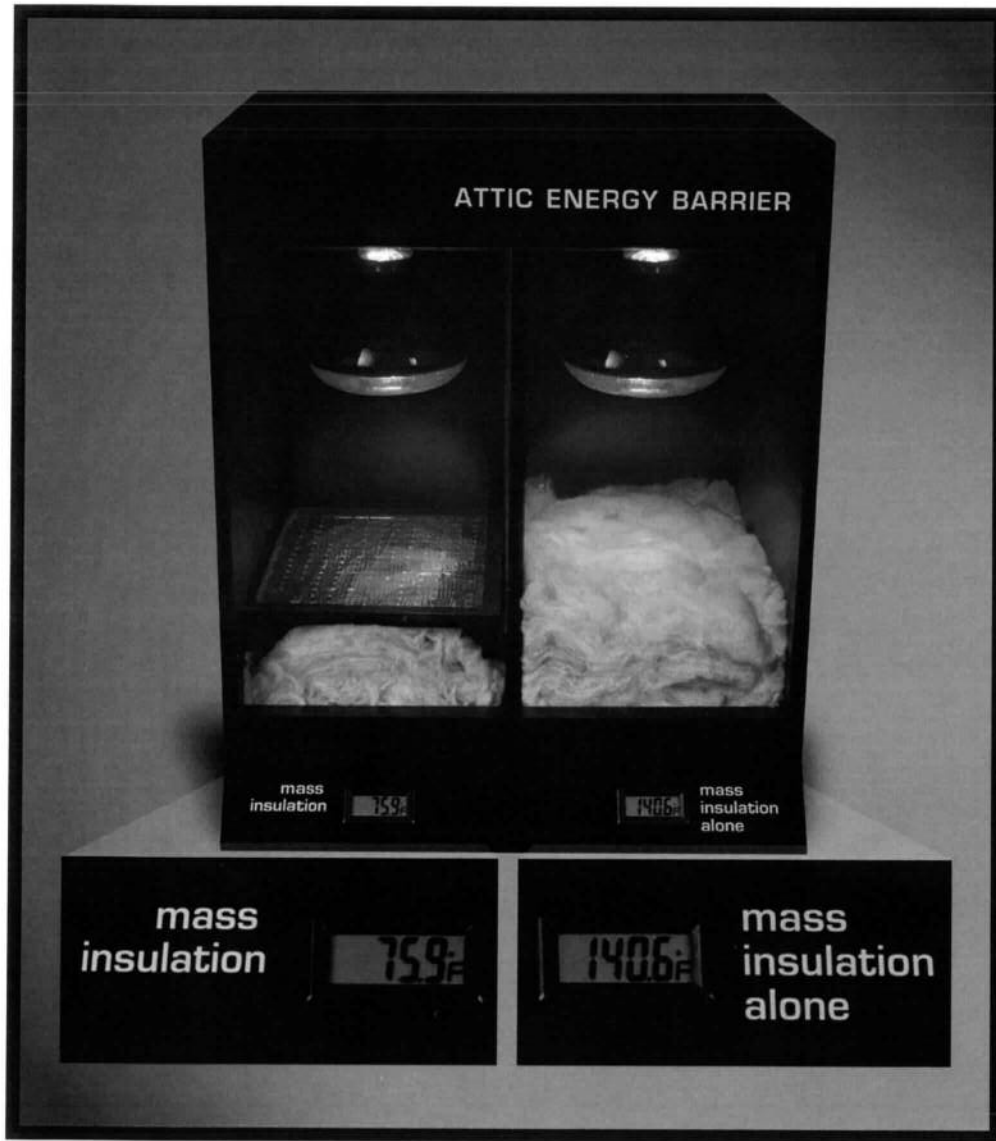

One layer of *SOLARSEAL* is equal to over 15" inches of traditional fiberglass insulation.

With Reflective Insulation

Without Reflective Insulation

An example of the temperature in your attic with insulation alone verses insulation + *SOLARSEAL*
